LIVA Mini PC
Fanless and Rugged IPC
All-in-One

Elitegroup Computer Systems, the world's leading manufacturer specialized in developing multiple shapes of motherboards and mini PCs, aims to create and inject more possibilities into different types of products to fulfill versatile using scenarios. We evolve with the trend of new technology, and also transform ourselves from the traditional manufacturer to an integrated solution advisor. With the vision and broad knowledge of IT industry, the innovation is continuously cultivated and implemented into the whole product category. Our mission is to assist all customers conquering all kinds of difficulties successfully and creating a bunch of added value in life.

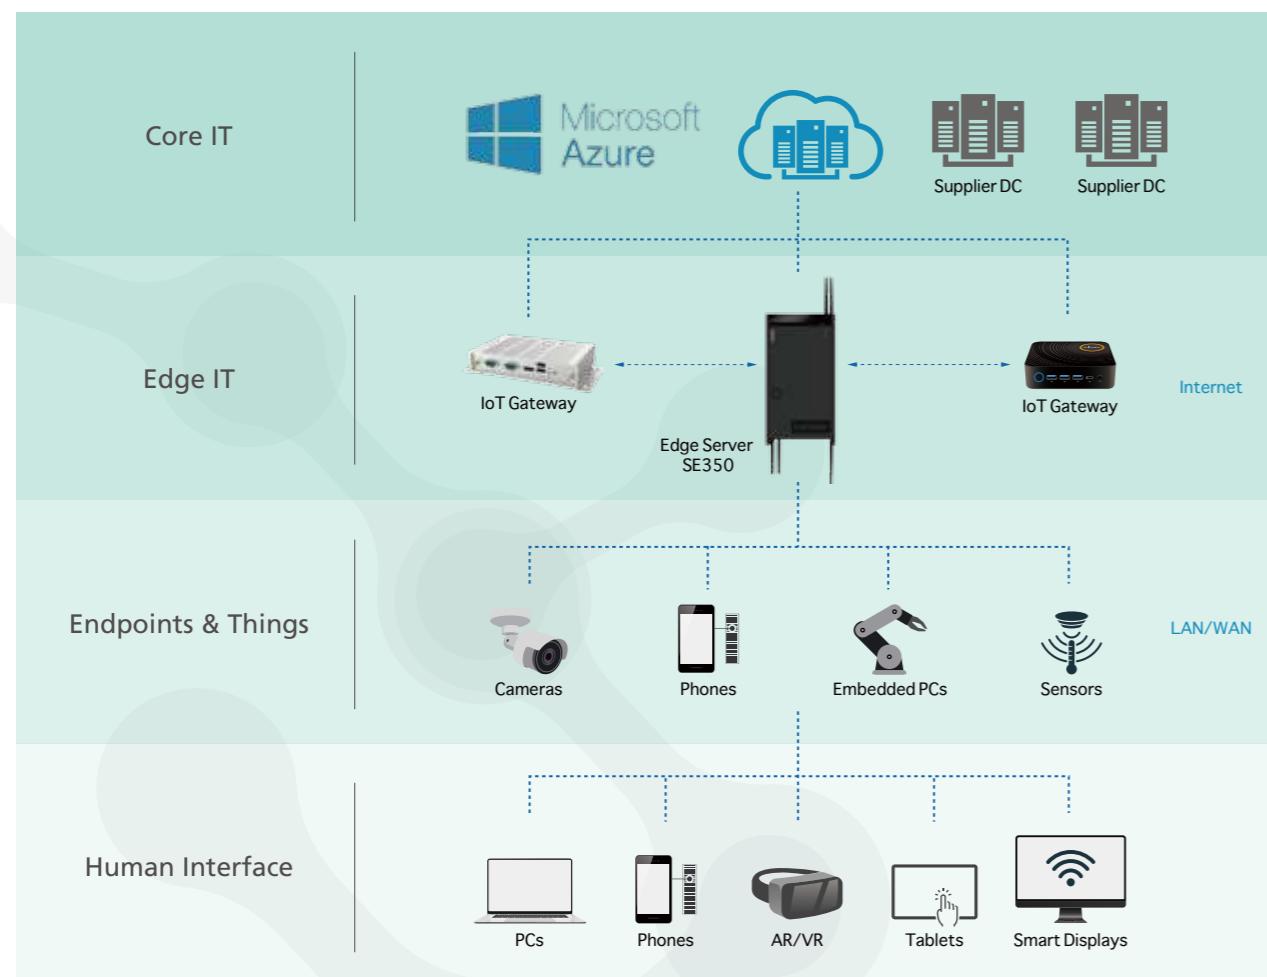

Think Small For Big Results

LIVA Mini PCs feature the flexibility, expandability and optimized performance in a compact body to tackle your daily computing tasks effortlessly. Furthermore, PC is at the heart of operation of entire application to start a better living style. It plays a very significant role to be a crucial part in the middle to complete the whole picture, and it has blossomed prosperously between us and our customers without doubt. The smallest things can make the biggest difference. We help you see it all so you can address it all, advancing productivity, efficiency, and profits.

Operational Architecture

Connected things are orchestrated through the respective stage inseparably. They distribute greater efficiency in the process achieving all kinds of applications. From the cloud to edge computing and local devices, these different devices of each stage have a unique role to well cooperate with each other depending on the exclusive technology. With IoT and AI, this framework can be widely used in many real cases of life. ECS has been working on the specific products fitting in the entire ecosystem, and keeps working together with numerous companies that can provide high-end edge computing products. After the integration, our mission is to unitedly build a more thorough network to facilitate the multiple using scenarios, and successfully offer an appropriate answer to the issue.

Public Security System

Nowadays, there are plenty of activities happening in the city, and transportation is the first thing taken into consideration when we leave the house. To ensure traffic safety, and to monitor emergencies, many street lights, utility poles or traffic facilities are equipped with surveillance cameras. However, most devices cannot record sounds or transfer the video files instantly for the real-time response. Through LIVA Mini PC as an intermediary device, it can record and transmit audio and video to the surveillance and control center, so that relevant parties are able to quickly grasp the conditions in a wide and spacious place. Not only can the manpower be streamlined, but also it can be deployed more efficiently.

Product Information KIOSK

In response to the booming trend of tourism, more and more foreign tourists travel around the world and buy goods at local shopping malls. Due to language differences, it takes some efforts to understand the details regarding the products, and often causes misunderstanding when making a purchase. Most of time, the in-store staff is limited or occupied, and foreign customers can't be assisted instantly and correctly, especially when they don't speak English.

LIVA Mini PC, barcode scanner and display fabricate a multi-language product inquiry machine to support the buying process. The related information, such as ingredients, usage and tutorials, will be displayed on the screen, after the customers chooses the selected language and scan the product barcode. Buying things will be easier, and more friendly to the foreigners.

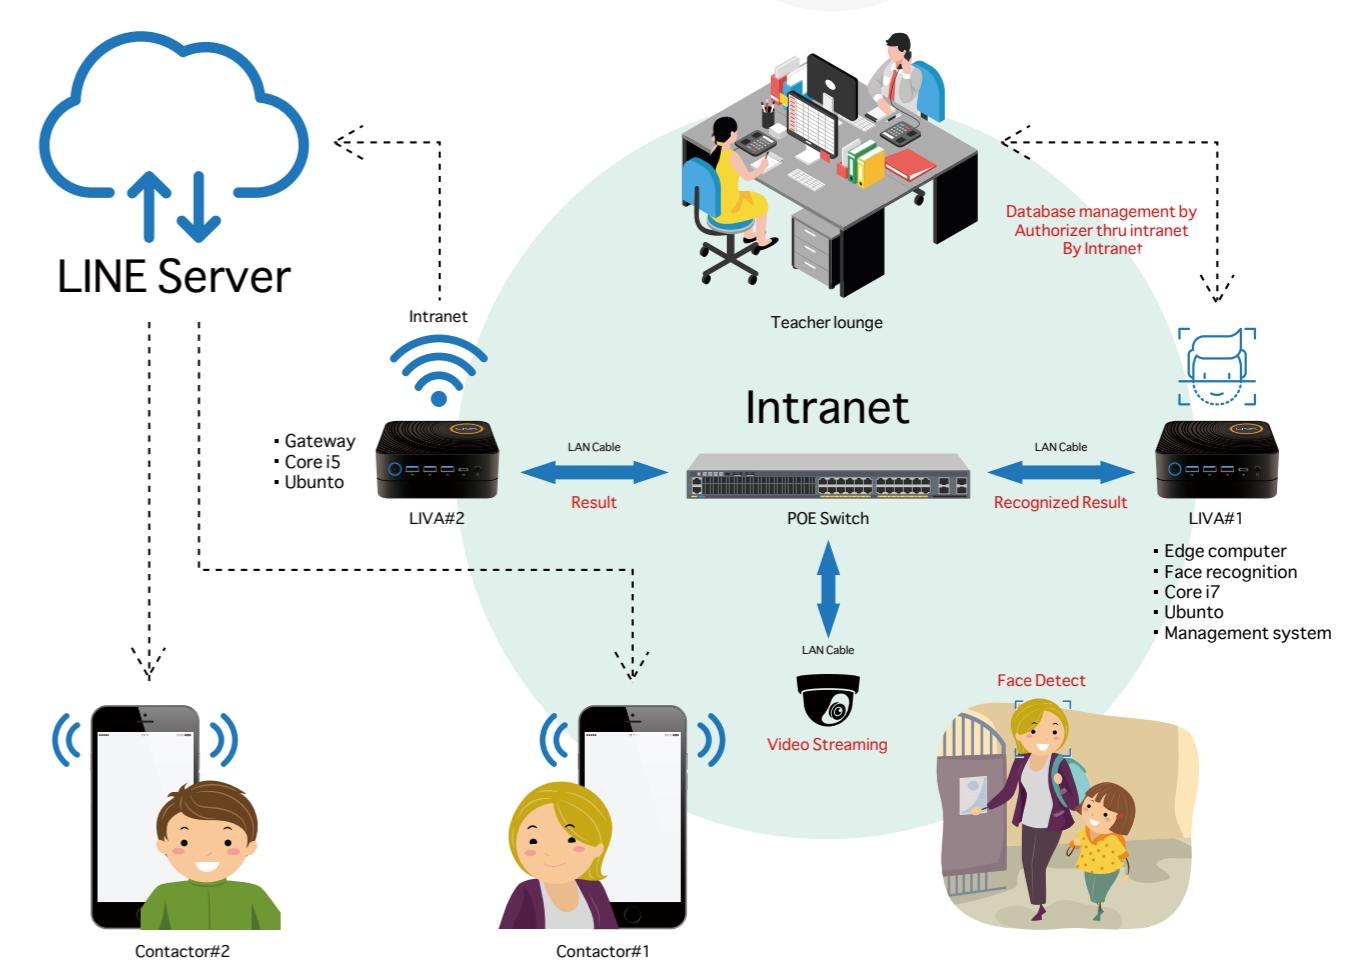

Children's Safety

Due to variety of social and economic factors, the number of children in a family is decreasing day by day, so that parents are paying more attention to the safety of children. In particular, the age of kindergarten to primary school students is most needed for parent's pick-up after school. LIVA Mini PC combines face recognition technology, cloud computing and collaboration with third-party social communications software. When

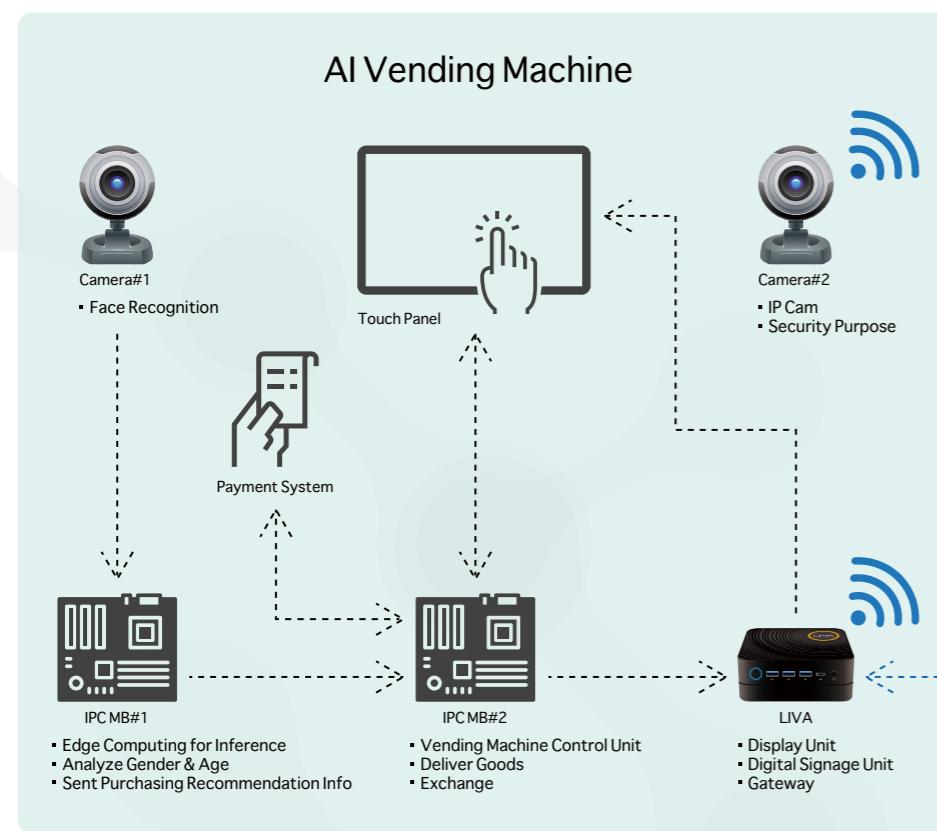

someone attempts to pick up a child from school, the system will immediately analyze the identity and automatically send an alert message to the parents and teachers via the communication software when kids leave the school. Multiple ways of precaution and protection allow parents to feel more reassured about the safety of younger children.

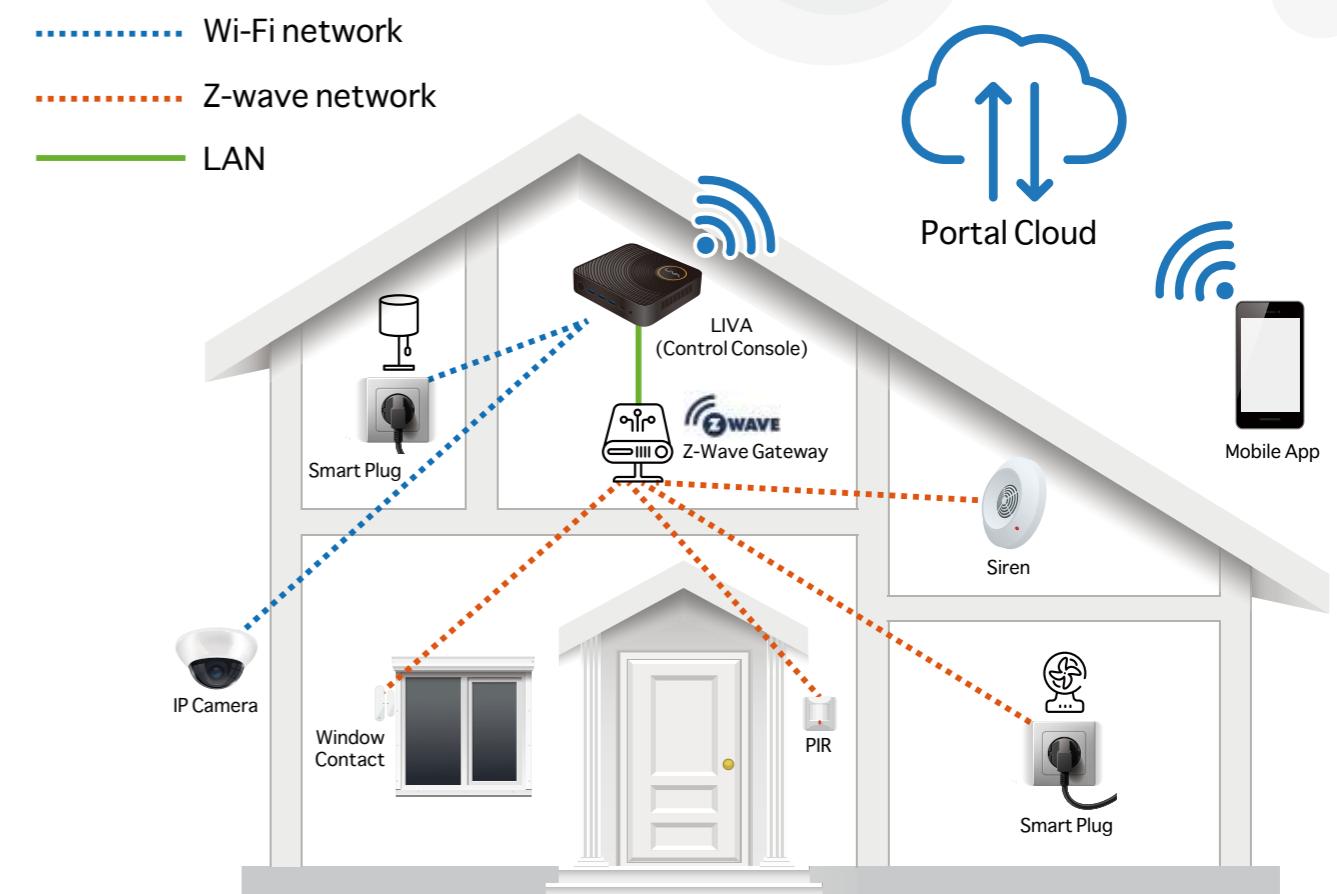

Smart Vending Machine

Japan is the country with the highest density of vending machines in the world. Therefore, creating bigger business opportunities to uplift sales number via the machines becomes more and more important. However, among the devices, there are rare ones functioned the wireless connection to the internet. To improve the situation, LIVA Mini PC is deployed as the hub of the vending machine. Through cloud computing and link with different devices, it help collect and analyze purchasing preference from the consumers for precision marketing effectively. In addition, thanks to face recognition and CMS (content management system), advertisement and information of the most recommended, or best selling products will be tweeted on the screen according to the gender and age of the consumers. We are selling not only goods but tailor-made one for your choice In the future.

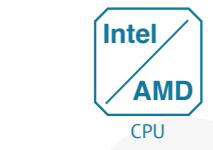

Intelligent Living

Smart appliances are prevailingly used in our daily life. They are more than just the household appliances to construct a small and intelligent ecosystem but offer a more convenient way of living. Connection between each other is the key in this environment, and we upgrade the function with LIVA Mini PC, as a computing server. It not only can manage information well and stably but contain the versatile usages in different role. PC collects, and stores data, then talk to Z-wave gateway and cloud to effectively execute the operation. It offers you to customize the configuration more easily. The compact design also makes it blend and take up less space.
